SOLUTIONS

- 
- ▶ Open source intelligence solution is implemented by CTS as a response to the growing threat of cyber attacks. It automates the process of information-gathering by thoroughly and quickly exploring the open-source information on the web such as social media networks, news networks, websites, blogs, other Internet sources and deep web.

This cluttered data extracted by OSINT Monitor is stored and processed into noise free quality data on Agencies local Database and converts it into valuable insights to improve situational awareness and to help in crime prevention. It will be of great use for Government Security Agencies, organizations and companies to effectively gain valuable insights.

SUCCESS STORIES

-
- ▶ The envisioned Client Property Evaluation System is designed to address the business and operational functions of a Real Estate Company. The application is web-based integrated with Google Earth to enhance the effectiveness of the system.

The CPES will provide comprehensive analyses of properties, including ownership information, sales history, a list of recent market sales transactions and an estimate of market value calculated using market-tested methods for valuing property.

- ▶ We have addressed best practices for modernizing operations and put our talents to work for airport authorities to optimize all the operations. The system automates processing and managing the entry at international airports of women workers coming to work in a Country which was otherwise a very complicated process.

It's a web based application to enable authorized users to access information organization wide replace the manual processes used by the Department (Women's section) to manage the flow of transactions, documents and communications with in the organization.

SUCCESS STORIES

- ▶ One of the Government agency aimed to migrate and replace the client/server applications to web-based in order to accelerate the process of collecting the data from the private sector for further analysis.

CTS was tasked to build the largest integrated secure electronic information system that collects the data from all the private sectors like Car rental companies and offices,hotels, furnished apartments,Gold and Jewelry Stores,Real estate companies etc.and stores it into unified database. The collected data is monitored against the blacklisted individuals and an alarm is raised to Security Experts on finding individual that they want to Monitor that helps to serve their national security concerns.
